Summary

Graphics Designer & Frontend Developer | Turning Ideas into Visual Experiences

I'm a passionate Graphics Designer and Frontend Developer who loves blending creativity with technology. My mission is to create visually appealing designs that not only look great but also function seamlessly. My goal is to use my skills to make amazing things and help my clients succeed.

What I Bring to the Table:

Creative Design: I specialize in creating modern, user-friendly designs that capture attention and convey messages effectively. From logos and branding to web and app interfaces, I bring ideas to life with style.

Frontend Development: I translate designs into clean, responsive code using HTML, CSS, and JavaScript. I ensure that every element is pixel-perfect and performs well across all devices.

User-Centered Approach: My focus is always on the user. I design and develop with the end-user in mind, making sure that the experience is intuitive, engaging, and satisfying.

Continuous Learning: Technology and design trends are always evolving, and so am I. I'm constantly learning new tools and techniques to stay ahead and deliver the best possible results.

Education

Higher secondary school karumpur

Bachelor of Science in Software Engineering, Computer Science · (August 2023 - August 2027)
